Programmer: Carl Pieper

Sample analysis - differences by CR group & gender in VO2max

We will need the following variables.....

PERSTRSS (outcome), time (visit), gender, CR group

Looking at the Proc Contents, these variables are located in the sas data sets vo2max, IVRSRND, & SUBJECT1,

```
*****
```

```
*****;
```

\*\*\*\* STEP 1: this program imports the data from a SAS xpt file \*\*\*

```
libname xptfile xport 'P:\Documents\Documents\CALARIE - Rochon\data from website\sas_database\analysis.xpt' access=readonly;
proc copy inlib=xptfile outlib=sasfile;
run;
```

```
***** */
```

```
*****
```

\* STEP 2: READ in the formats;

```
libname library 'P:\Documents\Documents\CALARIE - Rochon\data from website\sas_database';
proc format cntlin=sasfile.formats library=library;
run;
```

```

*****/*
